Abstract

Elysian Studio is an e-commerce platform focused on handmade products, artwork, crafts, and other creative items. The platform also provides an opportunity for new artists and creators to collaborate with Elysian Studio and showcase their products to customers.

Many independent creators struggle to reach customers and manage their products, while customers may find it difficult to discover unique handmade products from different creators in one place. Managing products, creators, customers, inventory, orders, payments, and collaborations separately can also lead to inefficient data management.

The proposed solution is a database-driven e-commerce platform that centralizes these activities. Creators can register and submit their handmade products for collaboration, while administrators can review and manage creators and products. Customers can browse products, search by categories, add items to their cart, and place orders. The database maintains structured information about creators, products, customers, inventory, orders, payments, and collaboration requests, while maintaining relationships between these entities.

The system aims to provide a well-organized digital marketplace for handmade products while supporting independent creators and simplifying product and order management through a centralized database.

Introduction

A marketplace that connects creativity with commerce while providing opportunities for emerging artists.

Elysian Studio is a database-driven e-commerce platform designed to connect independent artists and creators with customers interested in handmade products, artwork, crafts, and other creative items. The platform allows creators to showcase their products through collaboration while enabling customers to easily discover and purchase unique handmade items. It provides a centralized system for managing creators, products, customers, inventory, orders, payments, and collaboration requests, making the overall process more organized and efficient.
